

Dropdowns Validation

Application Used: Auto Play URL: <https://sdetqa.vercel.app/autoplay.html>

1. Test Cases – Single Select Dropdown (Country)

S.No	Steps	Expected Result
1	Launch the URL	Page should load successfully
2	Locate Country dropdown	Dropdown should be visible
3	Get default selected value	Default should be India (india)
4	Select option using label "USA"	Value should change to usa
5	Select option using value "uk"	Value should change to uk
6	Select option using index (3)	Value should be germany
7	Select option using value + label (France)	Value should be france
8	Count total dropdown options	Count should be 5
9	Get all option texts	List should contain "Germany"
10	Print dropdown options	All options should be displayed in console

2. Test Cases – Multi Select Dropdown (Colors)

S.No	Steps	Expected Result
11	Locate Colors dropdown	Dropdown should be visible
12	Get default selected value	Default should be blue
13	Select multiple options using labels (Red, Green, Yellow)	All should be selected
14	Select multiple options using values (red, green, yellow)	All should be selected
15	Select multiple options using index (0,2,3)	Correct options should be selected
16	Verify multiple selections	Selected values should match input

3. Test Cases – Sorted Dropdown Validation

S.No	Steps	Expected Result
17	Locate sorted dropdown options	Options should be visible
18	Get all dropdown option texts	Should return list of values
19	Store original list	Original order should be preserved
20	Create sorted copy of list	New sorted list should be created
21	Compare original vs sorted list	Both should be equal (sorted)

Important Concept Covered in Code

- ✗ optionsText.sort() → modifies original array (wrong approach)
- ✓ [...optionsText].sort() → creates copy (correct approach)
