◆ 7. Automation-Friendly Selectors (Recommended)

Use Case	CSS Selector	Why It's Good
Search box	#small-searchterms	Unique ID
Search button	input[value="Search"]	Stable
Register	a[href="/register"]	Reliable
Login	a[href="/login"]	Stable
Cart	a[href="/cart"]	Common
Menu items	ul.top-menu > li	Structured

Use Case	CSS Selector	Why It's Good
Product cards	.product-item	Reusable
Product title	.product-title a	Clean
Price	.prices span	Specific
Newsletter	#newsletter-email	Unique

Top 10 Selectors

#	CSS Selector	Use
1	#small-searchterms	Search input
2	input[value="Search"]	Search button
3	a[href="/register"]	Register
4	a[href="/login"]	Login
5	a[href="/cart"]	Cart
6	ul.top-menu > li	Menu
7	.product-item	Product cards
8	.product-title a	Product name
9	.prices span	Price
10	#newsletter-email	Email field

Notes

- Prefer **ID selectors** for stability
- Use **attribute selectors** when IDs are not available
- Avoid too many **nth-child()** unless necessary
- Combine selectors for better accuracy
- Keep selectors **short and readable**
